53RD ANNUAL
DESIGN REVIEW

POKER

No matter how the jurors rotated the joints of this single-lever faucet or aligned its cylinders, they came to same conclusion: "We like," Alhadeff said. "We want," McQuaid chimed in. In its folded state, Dunnigan compared the configuration "to an old-fashioned brace and bit drill," while Alhadeff praised its formal dexterity. "When it's closed up, the little gap between the head and the base repeats the proportions of the indented bands between the base sections," he said. The chrome-plated brass piece, designed for the Italian manufacturer Cisol S.p.A. by Florentine architect Luigi Trenti, who based the pivot on swing-arm lamp technology. Poker's tap, Trenti says, is meant to extend all around a sink and various work surfaces, but its limited height allows it to fit neatly under a row of cabinets. "When it's open you can use it for drying dishcloths and thin sponges," Trenti says. "When it's closed it just looks like a strange sculpture."
